ABOUT ME

I am responsible, communicative, patient, with a tolerance for frustration because I'm always looking for solutions or ideas, and without issues for teamwork.

I'm interested in the different parts of application development, and that's why I'm always open to learning new things.

EDUCATION

EducacionIT
Full-Stack Development
2021-2021

Potrero Digital
Front-End Development
2020-2020

Sch. Cap. Daniel Manzotti
Electronic Technician
2012 - 2017

EXPERIENCE

Plus+Ups

I am part of the development team giving solutions to companies with web or mobile applications, working on the data model, its parametric and transactional entities, the relationship between these and their AMD screens, considering user experience, software documentation, scalability, architecture or the patterns upon which it is built, solving legacy bugs.

Using Frontend tools such as TypeScript, Angular, RxJS, or Backend such as Java, Spring and their frameworks, Liquibase for modifying and recording changes in the database, Hibernate for mapping classes, handle their relationships and for queries to the database, JasperReports and Apache POI for creating reports files in PDF or XLSX format, OpenCV for creating XML models for object identification, MySQL or PostgreSQL such as DDBB, NativeScript for creating Android and iOS applications, Git and agile methodologies. I have knowledge in GCP and Docker. The company also helped me study Kotlin for Android application development.
